See glossary on the back page for more detailed definitions of the indicators presented in this factsheet.

GLOSSARY	
Indicator	Definition
Claimant rate	Number of people claiming working-age benefits as a proportion of the resident working age population (16-59F/64M)
Directly standardised mortality rate (DSR)	Number of deaths to persons usually resident in an area per 100,000 resident population, adjusted to take account of the age-structure of the population. This method allows comparisons to be made between areas with different population structures.
Indices of Multiple Deprivation (IMD)	The English Indices of Deprivation are the Government's official measure of deprivation. They bring together a range of indicators, covering different aspects or dimensions of deprivation, such as income, employment, health and disability, education, skills and training, barriers to housing and services, the living environment and crime. These are weighted and combined to create the overall IMD Score. The 2007 Indices (IMD 2007) update information provided in 2004 (IMD 2004).
Live birth rate	Number of live births per 1,000 resident population
Low birthweight	Percentage of all live and stillborn infants who are born with a stated birthweight weighing under 2,500 grams
95% Confidence Limit	Confidence limits provide an indication of the range of values – upper and lower - within which the "true" value of a statistic (e.g. a mortality rate) can be expected to be located 95% of the time.
Population density	Total number of people estimated to be usually living in an area per hectare
Resident population estimates	Total number of people estimated to be usually living in an area, whatever their nationality. The figures include people from outside the UK who plan to stay in the country for 12 months or more but exclude visitors and short-term migrants. Students are taken to be resident at their term-time address.
Resident population projections	Estimate of the future number of people likely to be resident in an area based on recent trends in births, deaths and migration. The projections are based solely on demographic factors and do not take into account local issues, such as the impact of new housing developments.
Smoking quit rate	Number of people in contact with NHS Stop Smoking Services who have successfully quit after 4 weeks as a proportion of all people setting a quit date
Under-18 conception rate	Number of births and conceptions to mothers aged under 18 per 1,000 females aged 15-17 years
Unemployment rate	Number of people claiming Jobseeker's Allowance (JSA) as a proportion of the resident working age population (16-59F/64M)
